
Cybersecurity and Data Privacy

Cybersecurity is a growing concern for many of our institutional clients. Our Cybersecurity and Data Privacy Team offers a full range of solutions to our clients so they can manage data and safely operate in the marketplace. We regularly counsel our clients on legislative regulatory developments, claims, technology, litigation and security breaches as well as provide industry-specific counseling on cybersecurity laws. Our vast experience includes providing guidance on best practices in the event of a breach, drafting cybersecurity policies for institutional clients and advising clients on issues concerning cybersecurity insurance. In addition, our team has worked with cybersecurity insurance companies, third-party forensic firms, public relations firms, and credit monitoring companies.
